

# Global AI Ecosystem Atlas

Follow the resources, knowledge, labour and power behind AI. Two maps, one connected ecosystem.

Two complementary maps: the technology stack and the global ecosystem. A dedicated Türkiye focus connects local capabilities to international dependencies.

**52 selected organizations / programs**

102 source records | Offline interactive companion | Clickable source links

For presentation: use full-screen PDF mode. For exploration: open [global-ai-atlas.html](#) in a browser. Appendix pages provide the directory and sources.

# How to read the atlas

The classifications are part of the story.

## Locations

HQ = explicit headquarters evidence.

Registered office = legal address.

Base = organizational or research anchor.

Operations = a small selection of sourced overseas sites.

Coordinates are approximate, not facility addresses.

Dashed ring = country-level position, not a city

## Actors

Company

Public / academic research

Government / intergovernmental

Nonprofit / community

These are editorial functional classes. A public research institute can also develop models.

## Connections

Documented = cited real relationship.

Planned = future activity, separately labelled.

Illustrative = educational process link.

Co-location or a shared layer implies no business relationship. Marker size does not show market share.

This is a teaching sample, not a ranking or census. Unmarked places can still have important AI activity. Organizational bases do not locate all users, workers, data or compute.

# 01 / The technology stack

Start at the bottom. Applications depend on the layers beneath them.

- 7 Applications**  
OpenAI · Anthropic · Mistral AI · DeepSeek · Sarvam AI · Lelapa AI · DeepL · +4
- 6 Developer tools**  
NVIDIA · Amazon Web Services · Alibaba Cloud · OpenAI · Anthropic · Mistral AI · DeepSeek · +5
- 5 Models**  
OpenAI · Anthropic · Google DeepMind · Mistral AI · DeepSeek · Sarvam AI · AI Singapore / SEA-LION · +10
- 4 Data & human labour**  
Appen · Sama · Common Crawl · Masakhane · AI Singapore / SEA-LION · CENIA / LatamGPT · Hugging Face · +2
- 3 Compute**  
Amazon Web Services · OVHcloud · Alibaba Cloud · RIKEN R-CCS · LNCC / Santos Dumont · TÜBİTAK ULAKBİM / TRUBA · Turkcell · +2
- 2 Chips**  
ASML · Tokyo Electron · NVIDIA · TSMC · SK hynix · Arm · Google / Google Cloud · +1
- 1 Physical resources**  
Schneider Electric · Statkraft · Glencore

Layer order is illustrative. Data and compute feed model development together; tools, research and governance also act throughout the stack.

## Across every layer

### Research & communities

Methods, datasets, skills and evaluation.

Masakhane · OpenAI · Anthropic · Google  
DeepMind · AI Singapore / SEA-LION ·  
Technology Innovation Institute · CENIA /  
LatamGPT · +13

### Governance & accountability

Laws, frameworks, public oversight and  
civil society.

UNESCO · OECD.AI · European Commission / AI  
Office · NIST · AlgorithmWatch · KVKK · Ministry  
of Industry and Technology

# Training and inference are different

The same infrastructure supports both, but an ordinary prompt is not necessarily model retraining.

## Before your request: training

### 1 / Examples & labour

Collect, licence, clean and label examples.

### 2 / Compute & learning

Adjust parameters to improve an objective.

### 3 / Adapt & evaluate

Fine-tune, get feedback and test behaviour.

### 4 / Deploy a version

Package weights and policies into a service.

## During your request: inference

### 1 / Receive input

The app collects text/media and settings.

### 2 / Assemble context

Instructions, history and optional retrieval.

### 3 / Run calculations

A trained model produces tokens or other outputs.

### 4 / Return or act

Checks, formatting and optional tool calls.

Illustrative process links, not a vendor trace. Tool calls can loop through several inference steps. Retained logs may later enter training under the service policy. Sources: [S02](#) · [S03](#)

# Resources, hardware, capacity

---

## Physical resources

AI runs on physical machines. Their construction and operation use materials, electricity and cooling; the impact depends on place, time and design.

**Investigate:** Who supplies the power and water, and who bears the local costs?

**Request evidence:** Grid connection agreements, permits, hourly electricity mix, water withdrawals and consumption, equipment supply contracts.

---

## Chips

Chip designers specify processors. Foundries manufacture silicon; memory and packaging connect the pieces. GPUs accelerate parallel calculations, but CPUs and other accelerators also matter.

**Investigate:** Which supplier or export restriction could interrupt this system?

**Request evidence:** Supplier filings, chip specifications, fabrication and packaging locations, export licences.

---

## Compute

Compute is the capacity to run calculations. A cloud sells access to machines; a data centre houses them. Public research clusters serve different users from commercial clouds.

**Investigate:** Who can access capacity, at what price, and under whose jurisdiction?

**Request evidence:** Live service-region lists, access rules, procurement records, utilisation and queue times.

# Data, models, developer tools

## Data & human labour

People collect, clean, label and evaluate data. Training material can include licensed, public, personal and synthetic data. Publicly accessible does not automatically mean freely reusable.

**Investigate:** Whose work and language are represented, paid for or excluded?

**Request evidence:** Dataset documentation, licences, worker contracts, pay records, consent and grievance procedures.

## Models

Training changes numerical parameters using examples and an objective. Inference applies a trained model to new inputs. An LLM generates tokens from context; fluent output can still be wrong.

**Investigate:** What was trained, on which data, and how was performance independently tested?

**Request evidence:** Model cards, training reports, evaluation datasets, licences and reproducible tests.

## Developer tools

Tools help developers train, access and connect models. An API is a service interface. Retrieval adds documents at use time; agents can call tools and carry out actions.

**Investigate:** Which external services receive user data or control essential functions?

**Request evidence:** Architecture diagrams, API terms, data-flow logs, retention rules and tool permissions.

# Applications, research, accountability

---

## Applications

Applications combine models with interfaces, business rules and people. AI also ranks content, predicts demand and detects patterns; it extends far beyond chatbots.

**Investigate:** What changes for the person affected, and can they challenge the outcome?

**Request evidence:** Before/after workflow records, error rates by group, appeals, incidents and user interviews.

---

## Research & communities

Universities, public labs and communities create methods, datasets and skills across every layer. Commercial research and public research overlap, but incentives and access differ.

**Investigate:** Who funds the research, sets the benchmark and gets to reproduce it?

**Request evidence:** Funding disclosures, publications, compute access and participation rules.

---

## Governance & accountability

Governance shapes the entire lifecycle. Binding laws, voluntary frameworks, ethical recommendations and watchdog reporting are different instruments.

**Investigate:** Who has enforceable authority, and what remedy exists when AI causes harm?

**Request evidence:** Legal texts, regulator decisions, audits, procurement rules and complaint records.

## 02 / The global ecosystem

Organizational bases are one view of a multinational and distributed system.

Company: circle | Public/academic research: triangle | Government/IGO: square | Nonprofit/community: diamond · Dashed ring = country-level position, not a city

**The Americas** / NVIDIA · Amazon Web Services · Sama · Common Crawl · OpenAI · Anthropic · CENIA / LatamGPT · +7

**East, South & Southeast Asia** / Tokyo Electron · TSMC · SK hynix · Alibaba Cloud · DeepSeek · Sarvam AI · AI Singapore / SEA-LION · +2

**Türkiye** / TÜBİTAK ULAKBİM / TRUBA · Turkcell · T3 Foundation / T3 AI · HAVELSAN / MAIN · SESTEK · Boğaziçi University / BOUN Treebank · Türkiye AI Initiative (TRAI) · +3

Approximate organizational bases; overlapping pins are separated in the interactive map. Masakhane is distributed, without a fabricated HQ. Natural Earth land outline; no political boundaries. Bases do not locate all operations, data or users.

**Europe & the Middle East** / Schneider Electric · ASML · Arm · OVHcloud · Google DeepMind · Mistral AI · Technology Innovation Institute · +7

**Africa & Oceania** / Appen · Masakhane · Lelapa AI · Data Science Nigeria · CSIRO

# Operations can tell a different geography

Ten selected overseas-site records; not an exhaustive footprint.

Hollow circles = selected sites. NVIDIA's first US-made Blackwell wafer (October 2025) documents TSMC Arizona fabrication; packaging remained in Taiwan. Appen's Kirkland marker is an additional US headquarters; other markers are selected offices. Office presence does not locate all contributors.

## ASML

San Diego, United States; Berlin, Germany; Linkou, Taiwan  
Sources: [S86](#)

## TSMC

Phoenix, United States  
Sources: [S63](#)

## Sama

Nairobi, Kenya; Gulu, Uganda  
Sources: [S15](#)

## Appen

Kirkland, United States; Cavite, Philippines; Hyderabad, India; Hanoi, Vietnam  
Sources: [S14](#)

# Documented connections, with limits

These are the only named relationships presented as evidenced connections. Stack diagrams and the chatbot journey are illustrative. Partnerships and capacity commitments do not establish exclusivity or delivery.

## DOCUMENTED / FIRST-WAFER MILESTONE

### NVIDIA → TSMC: chip fabrication

On 17 October 2025 NVIDIA announced the first Blackwell wafer produced at TSMC Arizona. Advanced CoWoS packaging still took place in Taiwan, so this is neither an end-to-end US-made chip nor evidence that every NVIDIA chip is made there.

Sources: S63 · S81

## DOCUMENTED / INSTALLED CONFIGURATION

### TRUBA ARF-ACC → NVIDIA: GPU hardware

The published queue table identifies NVIDIA H100 and H200 GPUs. This does not establish a direct procurement contract with NVIDIA. Under the US AI Diffusion Rule of January 2025, Türkiye faced capped access to such chips; the rule was rescinded in May 2025 before taking effect.

Sources: S65 · S80 · S79

## DOCUMENTED / PARTNERSHIP AND CAPACITY COMMITMENTS

### Anthropic → AWS: training/cloud capacity

In April 2026 Anthropic again named AWS its primary training and cloud provider, with up to 5 GW of new capacity planned. Future capacity is not all live, and Anthropic also uses Google TPUs and NVIDIA systems on Azure.

Sources: S64

## DOCUMENTED / PLANNED

### Turkcell ↔ Google Cloud: planned Türkiye region

Google announced a Türkiye cloud region with Turkcell in November 2025, citing a 10-year, \$2 billion investment; Turkcell estimates operation in 2028-2029. Existing Turkcell data centres are not relabelled as that region.

Sources: S66 · S70 · S42

# Documented connections, with limits (continued)

---

## DOCUMENTED / ANNOUNCED CAPACITY EXPANSION

### Anthropic → Google Cloud: TPU capacity

Anthropic announced in October 2025 that it would use up to one million Google Cloud TPUs, with well over a gigawatt expected online in 2026. Announced capacity is not all live.

Sources: [S68](#)

---

## DOCUMENTED / ENDED

### Meta → Sama: data annotation (ended 2026)

Sama annotators in Kenya labelled footage from Meta's smart glasses. After Swedish reporting in February 2026 on intimate footage, Meta ended the contract and Sama issued 1,108 redundancy notices. Meta says Sama did not meet its standards; Sama disputes this.

Sources: [S73](#)

---

## DOCUMENTED / PURCHASE COMMITMENT

### Anthropic → Microsoft Azure / NVIDIA: compute commitment

In November 2025 Anthropic committed to buy \$30 billion of Azure compute, initially up to one gigawatt on NVIDIA Grace Blackwell and Vera Rubin systems. A purchase commitment is not capacity in use.

Sources: [S69](#)

---

## DOCUMENTED / MODEL LINEAGE

### Latam-GPT → Meta Llama: base model

Latam-GPT, launched in February 2026, adapts Meta's Llama-3.1-70B and is distributed under the Llama 3.1 licence. A regional model can still depend on a foreign base model's weights and terms.

Sources: [S74](#)

# Türkiye / Capabilities across the stack

Ten selected institutions and programs. Local activity and international dependencies coexist.

## Capacity already visible

TRUBA research computing; domestic commercial data centres; Turkish-language models such as T3 AI, BİLGE and MAIN; speech and enterprise applications.

## Policy, not just slogans

The Türkiye AI Action Plan (2026-2030) entered into force through Presidential Circular 2026/9 on 18 August 2026. Its targets include at least 1 GW of data-centre capacity by 2030. Obtain budgets, responsible agencies and progress reports before judging delivery; the 2021-2025 strategy is now historical context.

## Three evidenced connections

ARF-ACC uses NVIDIA hardware. Turkcell's Google region is planned. SESTEK has an Istanbul base and Unifonic ownership. Each demonstrates a different kind of international connection.

## The reporting test for “national AI”

Separate training origin, model licence, Turkish evaluation, data location, legal control, chip/cloud suppliers and procurement. A Turkish interface or local deployment proves none of the other dimensions.

### Existing service ≠ planned investment ≠ independently demonstrated performance.

The proposed Google Cloud region is labelled planned. Local data centres, Turkish models and foreign hardware are separate observations. A national label does not establish the origin of an entire stack.

Sources: S67 · S49

# Türkiye / Organizations and questions

## TÜBİTAK ULAKBİM / TRUBA

Public / academic research | Base: Ankara / research infrastructure, Türkiye

Provides national research computing, including ARF and the ARF-ACC GPU cluster.

Published ARF-ACC queue documentation lists NVIDIA H100/H200 hardware.

**Investigate:** Who gets GPU time, how long are queues, and which suppliers support the cluster?

Sources: [S41](#) · [S61](#) · [S62](#)

## T3 Foundation / T3 AI

Nonprofit / community | HQ: Istanbul, Türkiye

Turkish-language model and community initiative led by T3 Foundation and developed with Baykar.

The foundation describes an open-source project; inspect release artefacts before treating that as a licence classification.

**Investigate:** What data, weights, code and evaluation are actually available?

Sources: [S43](#) · [S84](#) · [S96](#)

## Turkcell

Company | HQ: Istanbul, Türkiye

Operates domestic data-centre/cloud infrastructure and has a planned Google Cloud region partnership.

Existing infrastructure differs from the planned Google region, which Turkcell estimates will operate in 2028-2029; Turkcell plans to invest \$1 billion in data centres and cloud.

**Investigate:** Which capacity is live, and which part is an investment commitment?

Sources: [S42](#) · [S70](#)

## HAVELSAN / MAIN

Company | HQ: Ankara, Türkiye

Provides the MAIN enterprise AI platform, including deployment on closed networks.

Company markets domestic AI capabilities; the claim does not establish a wholly domestic supply chain.

**Investigate:** Which components are developed locally, licensed or imported?

Sources: [S44](#) · [S57](#)

# Türkiye / Organizations and questions (continued)

---

## SESTEK

Company | Base: Istanbul, Türkiye

Develops conversational automation and speech technology.

Turkish operating base; part of Unifonic, illustrating ownership beyond the local ecosystem.

**Investigate:** Where are models, customer recordings and ownership decisions located?

Sources: S45 · S58

---

## Türkiye AI Initiative (TRAI)

Nonprofit / community | Base: Istanbul ecosystem platform, Türkiye

Connects businesses, provides training and maintains an AI startup map.

A commercial ecosystem platform, not an independent regulator; its directory is a discovery tool.

**Investigate:** Does being listed establish deployment, revenue or original model development?

Sources: S47

---

## Boğaziçi University / BOUN Treebank

Public / academic research | Base: Istanbul, Türkiye

University research includes manually annotated Turkish-language resources.

BOUN Treebank is a documented research resource; the cited paper is historical, not a 2026 release claim.

**Investigate:** Who annotates Turkish data, and what licence and coverage limits apply?

Sources: S46 · S59

---

## KVKK

Government / intergovernmental | Base: Ankara, Türkiye

Türkiye's personal-data protection authority publishes guidance on generative AI.

Personal-data oversight; guidance must be distinguished from statutory obligations and decisions.

**Investigate:** Where is personal data sent, and what lawful basis and remedy exist?

Sources: S48

# Türkiye / Organizations and questions (continued)

## Ministry of Industry and Technology

Government / intergovernmental | Base: Ankara, Türkiye

Coordinates industrial technology policy and the Türkiye AI Action Plan (2026-2030).

The plan entered into force through Presidential Circular 2026/9 (Official Gazette, 18 August 2026). Targets are commitments, not evidence of delivery.

**Investigate:** Which budgets, responsible agencies, milestones and progress reports back the plan's targets?

Sources: [S49](#) · [S67](#)

## TÜBİTAK BİLGEM / BİLGE

Public / academic research | Base: Gebze (Kocaeli), Türkiye

TÜBİTAK's informatics institute develops BİLGE, a Turkish large-language-model family unveiled in June 2026.

TÜBİTAK said in June 2026 that BİLGE was not yet a public service. Parameter counts and benchmark claims in media reports differ and are not independently verified.

**Investigate:** Which BİLGE models, training data, evaluations and access terms are actually published?

Sources: [S82](#) · [S83](#) · [S67](#)

# The test for “national AI”

---

## Compute

Which GPUs are available now? Ask for supplier/model, purchase records, allocations, queue times, actual utilisation and access rules.

---

## Model origin

Separate training from scratch, continued training, fine-tuning of external weights, retrieval and an API wrapper.

---

## Public policy

Obtain the adopted plan, appropriations, procurement contracts, measurable milestones, incident reports and oversight responsibilities.

---

## Language & data

Ask for Turkish datasets, licences, annotation methods, dialect coverage and evaluation by local speakers.

---

## Control & ownership

Separate local deployment from data ownership, legal jurisdiction, company control, foreign suppliers and a practical exit path.

# A 15-minute investigation exercise

Fictional pitch: “A national AI assistant will improve public services and keep citizens’ data at home.”

- 3 minutes** Map the operator, model developer, cloud provider and hardware suppliers.
- 4 minutes** Separate demonstrated facts, planned investments and marketing claims.
- 4 minutes** Choose three records to request and two affected groups to interview.
- 4 minutes** Write a supported headline and one question still unanswered.

60-minute route: 0-10 chatbot journey | 10-25 stack | 25-35 global map | 35-45 Türkiye | 45-60 exercise.

# Words that make the ecosystem legible

## AI / machine learning

AI is a broad field. Machine learning fits models from data; it includes prediction, ranking and generation.

## Transformer

A neural-network architecture using attention to relate parts of an input; influential in language and multimodal models.

## Token / context

Tokens are chunks of input/output. Context is the information available for the current calculation; it is not the entire training dataset.

## Neural network

A model with connected numerical parameters that are adjusted during training.

## Training / inference

Training changes model parameters. Inference uses a trained model to calculate an output. An ordinary prompt does not necessarily retrain the model.

## Parameters / weights

The numerical values learned during training. Model size alone does not establish quality or truth.

# Words that make the ecosystem legible (continued)

## Fine-tuning / retrieval

Fine-tuning adjusts weights. Retrieval fetches material into the current context, typically without changing weights.

## API / agent

An API exposes a service to software. An agent combines models with tools and a workflow to take actions.

## Data sovereignty

Ask separately about location, legal control, ownership, infrastructure suppliers, access and practical exit options.

## Open weights / open source

Downloadable weights do not by themselves establish open-source status. Check code, data information, licences and permitted uses for the exact release.

## Hallucination / evaluation

A plausible but unsupported output is often called a hallucination. Evaluate task performance and errors by language, group and context.

# Editorial method and practical limits

Editorial sample, not a ranking or census. Selected to show distinct functions, institution types, regions and language communities. One organization may occupy several layers. Blank areas mean omitted examples, not absence of AI activity. HQ/base markers describe organizations, not all compute, workers, users or ownership. Coordinates are approximate city or country positions, not facility addresses. Operations are a deliberately small sourced sample. No marker size encodes market share. Sources checked on 8 October 2026, with corrections and additions checked on 9 October 2026; historical reports retain their dates. Company statements verify stated products/relationships, not claimed accuracy or social benefit. Some official pages were accessible only as indexed excerpts; these are labelled in the source register.

## Source practice

Primary sources anchor products, roles and selected relationships. Company claims are attributed descriptions, not independent validation of performance. Indexed-only access is disclosed in the register. “Live page” means checked on the edition date, not continuously monitored.

## Open weights / open source

Open weights and open source are not interchangeable. This atlas avoids assigning a blanket model licence to an organization. Check the exact release and its code, weights, data information and permitted uses.

# Organization directory

## Schneider Electric

Company | HQ: Rueil-Malmaison, France

Supplies power management and cooling systems for data centres.

Global equipment provider; a location marker does not identify a particular customer.

Sources: [S04](#) · [S92](#)

## Tokyo Electron

Company | HQ: Tokyo, Japan

Supplies semiconductor production equipment.

Equipment and service business across chipmaking markets.

Sources: [S06](#) · [S91](#)

## ASML

Company | HQ: Veldhoven, Netherlands

Makes lithography equipment used to manufacture chips.

R&D/manufacturing in the Netherlands, US, Germany and Asia; selected sites shown in operations view.

Sources: [S05](#) · [S86](#)

## NVIDIA

Company | HQ: Santa Clara, United States

Designs GPUs and supplies the CUDA software platform.

Chip manufacturing is performed by partners; selected TSMC production is documented separately.

Sources: [S07](#) · [S52](#)

# Organization directory (continued)

## TSMC

Company | HQ: Hsinchu, Taiwan

Contract foundry manufacturing chips for other companies.

Headquarters in Taiwan; selected Arizona manufacturing shown separately.

Sources: S08

## Arm

Company | HQ: Cambridge, United Kingdom

Provides processor architecture and design technology.

Global offices and technology licensing; manufacturing is a separate activity.

Sources: S10

## SK hynix

Company | HQ: Icheon, South Korea

Makes memory, including high-bandwidth memory used in AI computing.

Icheon and Cheongju fabrication; overseas sites are not exhaustively mapped.

Sources: S09

## Amazon Web Services

Company | Base: Seattle, United States

Cloud infrastructure and managed AI services.

Global cloud regions; consult the live region list for any specific workload.

Sources: S11

# Organization directory (continued)

## OVHcloud

Company | HQ: Roubaix, France

Cloud infrastructure with GPU services for AI.

International data centres; headquarters and compute location are distinct.

Sources: [S12](#) · [S53](#)

## Appen

Company | HQ: Sydney, Australia

Provides human-supported AI data collection, annotation and evaluation.

Corporate HQ Sydney; US HQ Kirkland; offices listed in the UK, China, Japan, the Philippines, India and Vietnam.

Sources: [S14](#)

## Alibaba Cloud

Company | Base: Hangzhou, China

Cloud infrastructure with locations across multiple markets.

Operating cloud regions are listed separately from announced regions.

Sources: [S13](#)

## Sama

Company | Base: San Francisco, United States

Provides human-verified data annotation and evaluation.

Documented teams in Kenya and Uganda. In 2026 Meta ended an annotation contract after reporting on smart-glasses footage, and Sama issued 1,108 redundancy notices. Earlier, Sama workers labelled harmful text for OpenAI.

Sources: [S15](#) · [S55](#) · [S73](#) · [S85](#)

# Organization directory (continued)

## Common Crawl

Nonprofit / community | Base: US nonprofit / web-wide corpus, United States

Makes web crawl datasets available for research and other uses.

The corpus is global; a US organizational base does not describe the origins of all data.

Sources: [S16](#) · [S97](#)

## OpenAI

Company | Registered office: San Francisco, United States

Develops AI models, APIs and ChatGPT.

Products and research reach many markets; a base marker does not locate every inference request.

Sources: [S18](#) · [S87](#)

## Masakhane

Nonprofit / community | Base: Distributed African community, Distributed

Grassroots research community for African-language NLP.

Distributed participants; no single headquarters is assigned.

Sources: [S17](#)

## Anthropic

Company | Registered office: San Francisco, United States

Develops Claude models, products and safety research.

Multi-cloud: AWS is its primary training and cloud provider; it also announced up to one million Google TPUs (October 2025) and a \$30 billion Azure commitment on NVIDIA systems (November 2025).

Sources: [S19](#) · [S64](#) · [S68](#) · [S69](#) · [S88](#)

# Organization directory (continued)

## Google DeepMind

Company | HQ: London, United Kingdom

AI research organization developing models and scientific applications.

Part of Google; research teams and deployment infrastructure span countries.

Sources: [S20](#) · [S90](#)

## DeepSeek

Company | Base: Hangzhou, China

Develops language models, chat and API services.

Service operator is Hangzhou DeepSeek; downloaded weights and hosted services have different data flows.

Sources: [S22](#) · [S60](#)

## Mistral AI

Company | Registered office: Paris, France

Develops AI models and services, including Le Chat.

Model access and licence terms vary by release; check the specific model card.

Sources: [S21](#) · [S89](#)

## Sarvam AI

Company | Base: Bengaluru, India

Develops text, speech and language AI for Indian languages.

Bengaluru address; multilingual models and APIs serve Indian-language use cases.

Sources: [S23](#) · [S54](#)

# Organization directory (continued)

## AI Singapore / SEA-LION

Public / academic research | Base: Singapore, Singapore

Develops multilingual models and evaluation resources for Southeast Asia.

Regional language coverage; the program is based in Singapore.

Sources: [S24](#) · [S102](#)

## CENIA / LotamGPT

Public / academic research | Base: Santiago, Chile

AI research centre coordinating a Latin American language-model initiative.

Lotam-GPT launched in February 2026: a 70-billion-parameter model adapted from Meta's Llama 3.1 and reportedly trained on AWS. Chilean coordination is not the location of every contributor.

Sources: [S26](#) · [S56](#) · [S74](#) · [S75](#)

## Technology Innovation Institute

Public / academic research | Base: Abu Dhabi, United Arab Emirates

Applied research institute associated with the Falcon model family.

UAE research base; availability and licences depend on the model release.

Sources: [S25](#)

## Lelapa AI

Company | Base: South Africa / country-level marker, South Africa

Builds multilingual speech and translation tools, including Vulavula.

Focus on African-language and code-switching use cases; no city-level HQ claim here.

Sources: [S27](#)

# Organization directory (continued)

## Hugging Face

Company | Base: New York base / international team, United States

Hosts models, datasets and developer collaboration tools.

International platform and community; hosted repositories have their own licences.

Sources: [S28](#)

## DeepL

Company | Registered office: Cologne, Germany

Provides translation, writing and language-service interfaces.

Cologne registered office; users and product availability span markets.

Sources: [S30](#)

## PyTorch Foundation

Nonprofit / community | Base: US foundation / global contributors, United States

Supports the PyTorch machine-learning software ecosystem.

Under the Linux Foundation; development is distributed internationally.

Sources: [S29](#)

## Mila

Public / academic research | Base: Montréal, Canada

Nonprofit AI research institute bringing together university researchers.

Montréal research base; international collaborations.

Sources: [S31](#) · [S98](#)

# Organization directory (continued)

## RIKEN R-CCS

Public / academic research | Base: Kobe, Japan

Research centre for computational science and supercomputing.

Kobe centre; public scientific computing serves multiple fields, including AI research.

Sources: [S32](#)

## Data Science Nigeria

Nonprofit / community | Base: Lagos, Nigeria

Builds AI skills, research and social-impact applications.

Lagos research centre and broader training activity; international collaborations.

Sources: [S34](#)

## LNCC / Santos Dumont

Public / academic research | Base: Petrópolis, Brazil

National scientific computing laboratory hosting Santos Dumont.

Brazilian research computing infrastructure; not exclusively an AI facility.

Sources: [S33](#) · [S101](#)

## CSIRO

Public / academic research | Base: Australia / country-level marker, Australia

Australia's national science agency conducts AI research and applied work.

Multiple Australian sites; marker represents the agency rather than a particular lab.

Sources: [S35](#)

# Organization directory (continued)

## UNESCO

Government / intergovernmental | Base: Paris secretariat, France

Publishes a global recommendation on AI ethics.

International membership; an ethical recommendation is distinct from domestic enforcement.

Sources: [S36](#)

## European Commission / AI Office

Government / intergovernmental | Base: Brussels, Belgium

EU institutions implement and coordinate the AI Act framework.

The AI Act applies in phases: general-purpose AI model rules since August 2025 and transparency duties since August 2026. The 2026 Digital Omnibus moved high-risk rules to 2 December 2027 (stand-alone) and 2 August 2028 (in regulated products).

Sources: [S38](#) · [S71](#) · [S72](#)

## OECD.AI

Government / intergovernmental | Base: Paris secretariat, France

Provides AI policy analysis, principles and incident resources.

Intergovernmental work; member coverage is not universal global representation.

Sources: [S37](#)

## NIST

Government / intergovernmental | Base: Gaithersburg, United States

Publishes the voluntary AI Risk Management Framework.

US standards institute; voluntary use is distinct from a binding legal requirement.

Sources: [S39](#)

# Organization directory (continued)

## AlgorithmWatch

Nonprofit / community | Base: Berlin, Germany

Investigates automated systems and their effects on society.

European civil-society work; it is not a regulator.

Sources: [S40](#)

## Turkcell

Company | HQ: Istanbul, Türkiye

Operates domestic data-centre/cloud infrastructure and has a planned Google Cloud region partnership.

Existing infrastructure differs from the planned Google region, which Turkcell estimates will operate in 2028-2029; Turkcell plans to invest \$1 billion in data centres and cloud.

Sources: [S42](#) · [S70](#)

## TÜBİTAK ULAKBİM / TRUBA

Public / academic research | Base: Ankara / research infrastructure, Türkiye

Provides national research computing, including ARF and the ARF-ACC GPU cluster.

Published ARF-ACC queue documentation lists NVIDIA H100/H200 hardware.

Sources: [S41](#) · [S61](#) · [S62](#)

## T3 Foundation / T3 AI

Nonprofit / community | HQ: Istanbul, Türkiye

Turkish-language model and community initiative led by T3 Foundation and developed with Baykar.

The foundation describes an open-source project; inspect release artefacts before treating that as a licence classification.

Sources: [S43](#) · [S84](#) · [S96](#)

# Organization directory (continued)

## HAVELSAN / MAIN

Company | HQ: Ankara, Türkiye

Provides the MAIN enterprise AI platform, including deployment on closed networks.

Company markets domestic AI capabilities; the claim does not establish a wholly domestic supply chain.

Sources: [S44](#) · [S57](#)

## Boğaziçi University / BOUN Treebank

Public / academic research | Base: Istanbul, Türkiye

University research includes manually annotated Turkish-language resources.

BOUN Treebank is a documented research resource; the cited paper is historical, not a 2026 release claim.

Sources: [S46](#) · [S59](#)

## SESTEK

Company | Base: Istanbul, Türkiye

Develops conversational automation and speech technology.

Turkish operating base; part of Unifonic, illustrating ownership beyond the local ecosystem.

Sources: [S45](#) · [S58](#)

## Türkiye AI Initiative (TRAI)

Nonprofit / community | Base: Istanbul ecosystem platform, Türkiye

Connects businesses, provides training and maintains an AI startup map.

A commercial ecosystem platform, not an independent regulator; its directory is a discovery tool.

Sources: [S47](#)

# Organization directory (continued)

## KVKK

Government / intergovernmental | Base: Ankara, Türkiye

Türkiye's personal-data protection authority publishes guidance on generative AI.

Personal-data oversight; guidance must be distinguished from statutory obligations and decisions.

Sources: S48

## Statkraft

Company | HQ: Oslo, Norway

Offers renewable electricity and site solutions for data centres.

Norwegian site offerings and power-market activities; no named customer dependency is inferred.

Sources: S50 · S94

## Ministry of Industry and Technology

Government / intergovernmental | Base: Ankara, Türkiye

Coordinates industrial technology policy and the Türkiye AI Action Plan (2026-2030).

The plan entered into force through Presidential Circular 2026/9 (Official Gazette, 18 August 2026). Targets are commitments, not evidence of delivery.

Sources: S49 · S67

## Glencore

Company | HQ: Baar, Switzerland

Produces and markets metals including copper and cobalt.

Global mining and commodity activities; inclusion illustrates material foundations, not supply to a named AI vendor.

Sources: S51 · S93

# Organization directory (continued)

## Google / Google Cloud

Company | Base: Mountain View, United States

Designs TPU accelerators, sells cloud capacity and develops Gemini models; parent of Google DeepMind.

Cloud regions worldwide, including a planned Türkiye region with Turkcell. TPUs are Google-designed chips made by partner foundries.

Sources: [S76](#) · [S68](#) · [S66](#) · [S99](#)

## Huawei (Ascend)

Company | HQ: Shenzhen, China

Designs Ascend AI processors and sells AI computing systems and cloud services.

On the US Entity List since 2019; 2025 US guidance warns that using certain Ascend chips anywhere may breach US export controls. Illustrates a parallel chip ecosystem.

Sources: [S78](#) · [S79](#) · [S95](#)

## Meta

Company | Base: Menlo Park, United States

Publishes Llama open-weight models and runs social platforms and AI-enabled devices.

Llama weights come with Meta's own licence terms, which models built on them inherit. Human review of device data has involved outsourced annotators.

Sources: [S77](#) · [S74](#) · [S73](#) · [S100](#)

## TÜBİTAK BİLGEM / BİLGE

Public / academic research | Base: Gebze (Kocaeli), Türkiye

TÜBİTAK's informatics institute develops BİLGE, a Turkish large-language-model family unveiled in June 2026.

TÜBİTAK said in June 2026 that BİLGE was not yet a public service. Parameter counts and benchmark claims in media reports differ and are not independently verified.
