

Global AI Ecosystem Atlas

Follow the resources, knowledge, labour and power behind AI.

Two complementary maps: the technology stack and the global ecosystem. A dedicated Türkiye focus connects local capabilities to international dependencies.

48 selected organizations / programs

66 source records | Offline interactive companion | Clickable source links

For presentation: use full-screen PDF mode. For exploration: open global-ai-atlas.html in a browser. Appendix pages provide the directory and sources.

How to read the atlas

The classifications are part of the story.

Locations

HQ = explicit headquarters evidence.

Registered office = legal address.

Base = organizational or research anchor.

Operations = a small selection of sourced overseas sites.

Coordinates are approximate, not facility addresses.

Actors

Company

Public / academic research

Government / intergovernmental

Nonprofit / community

These are editorial functional classes. A public research institute can also develop models.

Connections

Documented = cited real relationship.

Planned = future activity, separately labelled.

Illustrative = educational process link.

Co-location or a shared layer implies no business relationship. Marker size does not show market share.

This is a teaching sample, not a ranking or census. Unmarked places can still have important AI activity. Organizational bases do not locate all users, workers, data or compute.

01 / The technology stack

Start at the bottom. Applications depend on the layers beneath them.

Across every layer

Research & communities

Methods, datasets, skills and evaluation.
Mila · RIKEN · Masakhane · universities

Governance & accountability

Laws, frameworks, public oversight and civil society.
KVKK · EU institutions · NIST · UNESCO · AlgorithmWatch

Layer order is illustrative. Data and compute feed model development together; tools, research and governance also act throughout the stack.

Training and inference are different

The same infrastructure supports both, but an ordinary prompt is not necessarily model retraining.

Before your request: training

1 / Examples & labour	2 / Compute & learning	3 / Adapt & evaluate	4 / Deploy a version
Collect, licence, clean and label examples.	Adjust parameters to improve an objective.	Fine-tune, get feedback and test behaviour.	Package weights and policies into a service.

During your request: inference

1 / Receive input	2 / Assemble context	3 / Run calculations	4 / Return or act
The app collects text/media and settings.	Instructions, history and optional retrieval.	A trained model produces tokens or other outputs.	Checks, formatting and optional tool calls.

Illustrative process links, not a vendor trace. Tool calls can loop through several inference steps. Retained logs may later enter training under the service policy.

Sources: S02 · S03

Resources, hardware, capacity

Physical resources

AI runs on physical machines. Their construction and operation use materials, electricity and cooling; the impact depends on place, time and design.

Investigate

Who supplies the power and water, and who bears the local costs?

Request evidence

Grid connection agreements, permits, hourly electricity mix, water withdrawals and consumption, equipment supply contracts.

Chips

Chip designers specify processors. Foundries manufacture silicon; memory and packaging connect the pieces. GPUs accelerate parallel calculations, but CPUs and other accelerators also matter.

Investigate

Which supplier or export restriction could interrupt this system?

Request evidence

Supplier filings, chip specifications, fabrication and packaging locations, export licences.

Compute

Compute is the capacity to run calculations. A cloud sells access to machines; a data centre houses them. Public research clusters serve different users from commercial clouds.

Investigate

Who can access capacity, at what price, and under whose jurisdiction?

Request evidence

Live service-region lists, access rules, procurement records, utilisation and queue times.

Data, models, developer tools

Data & human labour

People collect, clean, label and evaluate data. Training material can include licensed, public, personal and synthetic data. Publicly accessible does not automatically mean freely reusable.

Investigate

Whose work and language are represented, paid for or excluded?

Request evidence

Dataset documentation, licences, worker contracts, pay records, consent and grievance procedures.

Models

Training changes numerical parameters using examples and an objective. Inference applies a trained model to new inputs. An LLM generates tokens from context; fluent output can still be wrong.

Investigate

What was trained, on which data, and how was performance independently tested?

Request evidence

Model cards, training reports, evaluation datasets, licences and reproducible tests.

Developer tools

Tools help developers train, access and connect models. An API is a service interface. Retrieval adds documents at use time; agents can call tools and carry out actions.

Investigate

Which external services receive user data or control essential functions?

Request evidence

Architecture diagrams, API terms, data-flow logs, retention rules and tool permissions.

Applications, research, accountability

Applications

Applications combine models with interfaces, business rules and people. AI also ranks content, predicts demand and detects patterns; it extends far beyond chatbots.

Investigate

What changes for the person affected, and can they challenge the outcome?

Request evidence

Before/after workflow records, error rates by group, appeals, incidents and user interviews.

Research & communities

Universities, public labs and communities create methods, datasets and skills across every layer. Commercial research and public research overlap, but incentives and access differ.

Investigate

Who funds the research, sets the benchmark and gets to reproduce it?

Request evidence

Funding disclosures, publications, compute access and participation rules.

Governance & accountability

Governance shapes the entire lifecycle. Binding laws, voluntary frameworks, ethical recommendations and watchdog reporting are different instruments.

Investigate

Who has enforceable authority, and what remedy exists when AI causes harm?

Request evidence

Legal texts, regulator decisions, audits, procurement rules and complaint records.

02 / The global ecosystem

Organizational bases are one view of a multinational and distributed system.

Company: circle | Public/academic research: triangle | Government/IGO: square | Nonprofit/community: diamond

North America / NVIDIA · OpenAI · Mila

Europe / ASML · Mistral · DeepL

Latin America / CENIA / LatamGPT · LNCC

Asia & UAE / TSMC · SK hynix · Sarvam · SEA-LION · TII

Africa & Oceania / Masakhane · Lelapa · DSN · Appen · CSIRO

Türkiye / TRUBA · T3 AI · SESTEK

Approximate organizational bases; overlapping pins are separated in the interactive map. Masakhane is distributed, without a fabricated HQ. Natural Earth land outline; no political boundaries. Bases do not locate all operations, data or users.

Research & communities · Public / academic research

Operations can tell a different geography

Ten selected overseas-site records; not an exhaustive footprint.

Hollow circles = selected sites. NVIDIA's 2025 announcement documents TSMC Arizona fabrication. Appen's Kirkland marker is an additional US headquarters; other markers are selected offices. Office presence does not locate all contributors.

ASML

San Diego, United States; Berlin, Germany; Linkou, Taiwan

Sources: S14

Documented connections, with limits

Documented / operating milestone

NVIDIA → TSMC: chip fabrication

NVIDIA reported Blackwell volume production at TSMC Arizona on 17 October 2025. This supports a fabrication relationship, not a claim that every NVIDIA chip is made there.

Sources: S63

Documented / installed configuration

TRUBA ARF-ACC → NVIDIA: GPU hardware

The published queue table identifies NVIDIA H100 and H200 GPUs. This does not establish a direct procurement contract with NVIDIA.

Sources: S65

Documented / partnership and capacity commitments

Anthropic → AWS: training/cloud capacity

Anthropic identifies AWS as its primary training/cloud provider in its 2026 compute update. Future capacity in the agreement is not all treated as live.

Sources: S64

Documented / planned

Turkcell ↔ Google Cloud: planned Türkiye region

Google announced a Türkiye region partnership. Turkcell's 2025 filing expects operation around 2028-2029. Existing Turkcell data centres are not relabelled as that region.

Sources: S66 · S42

These are the only named relationships presented as evidenced connections. Stack diagrams and the chatbot journey are illustrative. Partnerships and capacity commitments do not establish exclusivity or delivery.

Türkiye / Capabilities across the stack

Nine selected institutions and programs. Local activity and international dependencies coexist.

Capacity already visible

TRUBA research computing; domestic commercial infrastructure; Turkish-language data and model initiatives; speech and enterprise applications.

Policy, not just slogans

A September 2026 ministry account refers to a 2026-2030 action plan. Obtain the adopted text and budget before judging delivery. The 2021-2025 strategy is historical context, not the current horizon.

Current policy context: the ministry's September 2026 account refers to a 2026-2030 action plan. Its full adopted text and implementation status were not verified here. Do not reuse the 2021-2025 horizon as current.

Sources: S49

Three evidenced connections

ARF-ACC uses NVIDIA hardware. Turkcell's Google region is planned. SESTEK has an Istanbul base and Unifonic ownership. Each demonstrates a different kind of international connection.

The reporting test for “national AI”

Separate training origin, model licence, Turkish evaluation, data location, legal control, chip/cloud suppliers and procurement. A Turkish interface or local deployment proves none of the other dimensions.

Türkiye / Organizations and questions

TÜBİTAK ULAKBİM / TRUBA

Public / academic research | Base: Ankara / research infrastructure, Türkiye

Provides national research computing, including ARF and the ARF-ACC GPU cluster.

Sources: S41 · S61 · S62

Investigate: Who gets GPU time, how long are queues, and which suppliers support the cluster?

T3 Foundation / T3 AI

Nonprofit / community | HQ: Istanbul, Türkiye

Turkish-language model and community initiative led by T3 Foundation.

Sources: S43

Investigate: What data, weights, code and evaluation are actually available?

Turkcell

Company | Base: Istanbul, Türkiye

Operates domestic data-centre/cloud infrastructure and has a planned Google Cloud region partnership.

Sources: S42

Investigate: Which capacity is live, and which part is an investment commitment?

HAVELSAN / MAIN

Company | Base: Ankara, Türkiye

Provides the MAIN enterprise AI platform, including deployment on closed networks.

Sources: S44 · S57

Investigate: Which components are developed locally, licensed or imported?

Türkiye / Organizations and questions

SESTEK

Company | Base: Istanbul, Türkiye

Develops conversational automation and speech technology.

Sources: S45 · S58

Investigate: Where are models, customer recordings and ownership decisions located?

Türkiye AI Initiative (TRAI)

Nonprofit / community | Base: Istanbul ecosystem platform, Türkiye

Connects businesses, provides training and maintains an AI startup map.

Sources: S47

Investigate: Does being listed establish deployment, revenue or original model development?

Boğaziçi University / BOUN Treebank

Public / academic research | Base: Istanbul, Türkiye

University research includes manually annotated Turkish-language resources.

Sources: S46 · S59

Investigate: Who annotates Turkish data, and what licence and coverage limits apply?

KVKK

Government / intergovernmental | Base: Ankara, Türkiye

Türkiye's personal-data protection authority publishes guidance on generative AI.

Sources: S48

Investigate: Where is personal data sent, and what lawful basis and remedy exist?

Türkiye / Organizations and questions

Ministry of Industry and Technology

Government / intergovernmental | Base: Ankara, Türkiye

Coordinates industrial technology policy and AI-related investment initiatives.

Sources: S49

Investigate: Where are the adopted plan, budget, milestones and public progress reports?

The test for “national AI”

Compute

Which GPUs are available now? Ask for supplier/model, purchase records, allocations, queue times, actual utilisation and access rules.

Language & data

Ask for Turkish datasets, licences, annotation methods, dialect coverage and evaluation by local speakers.

Model origin

Separate training from scratch, continued training, fine-tuning of external weights, retrieval and an API wrapper.

Control & ownership

Separate local deployment from data ownership, legal jurisdiction, company control, foreign suppliers and a practical exit path.

Public policy

Obtain the adopted plan, appropriations, procurement contracts, measurable milestones, incident reports and oversight responsibilities.

A 15-minute investigation exercise

Fictional pitch: “A national AI assistant will improve public services and keep citizens' data at home.”

- 3 minutes Map the operator, model developer, cloud provider and hardware suppliers.
- 4 minutes Separate demonstrated facts, planned investments and marketing claims.
- 4 minutes Choose three records to request and two affected groups to interview.
- 4 minutes Write a supported headline and one question still unanswered.

60-minute route: 0-10 chatbot journey | 10-25 stack | 25-35 global map | 35-45 Türkiye | 45-60 exercise.

Words that make the ecosystem legible

AI / machine learning

AI is a broad field. Machine learning fits models from data; it includes prediction, ranking and generation.

Transformer

A neural-network architecture using attention to relate parts of an input; influential in language and multimodal models.

Token / context

Tokens are chunks of input/output. Context is the information available for the current calculation; it is not the entire training dataset.

Neural network

A model with connected numerical parameters that are adjusted during training.

Training / inference

Training changes model parameters. Inference uses a trained model to calculate an output. An ordinary prompt does not necessarily retrain the model.

Parameters / weights

The numerical values learned during training. Model size alone does not establish quality or truth.

Words that make the ecosystem legible

Fine-tuning / retrieval

Fine-tuning adjusts weights. Retrieval fetches material into the current context, typically without changing weights.

API / agent

An API exposes a service to software. An agent combines models with tools and a workflow to take actions.

Data sovereignty

Ask separately about location, legal control, ownership, infrastructure suppliers, access and practical exit options.

Open weights / open source

Downloadable weights do not by themselves establish open-source status. Check code, data information, licences and permitted uses for the exact release.

Hallucination / evaluation

A plausible but unsupported output is often called a hallucination. Evaluate task performance and errors by language, group and context.

Editorial method and practical limits

Editorial sample, not a ranking or census. Selected to show distinct functions, institution types, regions and language communities. One organization may occupy several layers. Blank areas mean omitted examples, not absence of AI activity. HQ/base markers describe organizations, not all compute, workers, users or ownership. Coordinates are approximate city or country positions, not facility addresses. Operations are a deliberately small sourced sample. No marker size encodes market share. Sources checked on 8 October 2026; historical reports retain their dates. Company statements verify stated products/relationships, not claimed accuracy or social benefit. Some official pages were accessible only as indexed excerpts; these are labelled in the source register.

Source practice

Primary sources anchor products, roles and selected relationships. Company claims are attributed descriptions, not independent validation of performance. Indexed-only access is disclosed in the register. “Live page” means checked on the edition date, not continuously monitored.

Open weights and open source are not interchangeable. This atlas avoids assigning a blanket model licence to an organization. Check the exact release and its code, weights, data information and permitted uses.

Organization directory

Schneider Electric

Company | Base: Rueil-Malmaison, France

Supplies power management and cooling systems for data centres.

Global equipment provider; a location marker does not identify a particular customer.

Sources: S04

Tokyo Electron

Company | Base: Tokyo, Japan

Supplies semiconductor production equipment.

Equipment and service business across chipmaking markets.

Sources: S06

ASML

Company | HQ: Veldhoven, Netherlands

Makes lithography equipment used to manufacture chips.

R&D/manufacturing in the Netherlands, US, Germany and Asia; selected sites shown in operations view.

Sources: S05

NVIDIA

Company | HQ: Santa Clara, United States

Designs GPUs and supplies the CUDA software platform.

Chip manufacturing is performed by partners; selected TSMC production is documented separately.

Sources: S07 · S52

Organization directory

TSMC

Company | HQ: Hsinchu, Taiwan

Contract foundry manufacturing chips for other companies.

Headquarters in Taiwan; selected Arizona manufacturing shown separately.

Sources: S08

Arm

Company | HQ: Cambridge, United Kingdom

Provides processor architecture and design technology.

Global offices and technology licensing; manufacturing is a separate activity.

Sources: S10

SK hynix

Company | HQ: Icheon, South Korea

Makes memory, including high-bandwidth memory used in AI computing.

Icheon and Cheongju fabrication; overseas sites are not exhaustively mapped.

Sources: S09

Amazon Web Services

Company | Base: Seattle, United States

Cloud infrastructure and managed AI services.

Global cloud regions; consult the live region list for any specific workload.

Sources: S11

Organization directory

OVHcloud

Company | Base: Roubaix, France

Cloud infrastructure with GPU services for AI.

International data centres; headquarters and compute location are distinct.

Sources: S12 · S53

Appen

Company | HQ: Sydney, Australia

Provides human-supported AI data collection, annotation and evaluation.

Corporate HQ Sydney; US HQ Kirkland; offices include Philippines, India and Vietnam.

Sources: S14

Alibaba Cloud

Company | Base: Hangzhou, China

Cloud infrastructure with locations across multiple markets.

Operating cloud regions are listed separately from announced regions.

Sources: S13

Sama

Company | Base: San Francisco, United States

Provides human-verified data annotation and evaluation.

Documented teams/sites in Kenya and Uganda; operations markers show Nairobi and Gulu.

Sources: S15 · S55

Organization directory

Common Crawl

Nonprofit / community | Base: US nonprofit / web-wide corpus, United States

Makes web crawl datasets available for research and other uses.

The corpus is global; a US organizational base does not describe the origins of all data.

Sources: S16

OpenAI

Company | Base: San Francisco, United States

Develops AI models, APIs and ChatGPT.

Products and research reach many markets; a base marker does not locate every inference request.

Sources: S18

Masakhane

Nonprofit / community | Base: Distributed African community, Distributed

Grassroots research community for African-language NLP.

Distributed participants; no single headquarters is assigned.

Sources: S17

Anthropic

Company | Base: San Francisco, United States

Develops Claude models, products and safety research.

Cloud partnerships include AWS; the atlas documents one selected training relationship.

Sources: S19

Organization directory

Google DeepMind

Company | Base: London research base, United Kingdom

AI research organization developing models and scientific applications.

Part of Google; research teams and deployment infrastructure span countries.

Sources: [S20](#)

DeepSeek

Company | Base: Hangzhou, China

Develops language models, chat and API services.

Service operator is Hangzhou DeepSeek; downloaded weights and hosted services have different data flows.

Sources: [S22](#) · [S60](#)

Mistral AI

Company | Base: Paris, France

Develops AI models and services, including Le Chat.

Model access and licence terms vary by release; check the specific model card.

Sources: [S21](#)

Sarvam AI

Company | Base: Bengaluru, India

Develops text, speech and language AI for Indian languages.

Bengaluru address; multilingual models and APIs serve Indian-language use cases.

Sources: [S23](#) · [S54](#)

Organization directory

AI Singapore / SEA-LION

Public / academic research | Base: Singapore, Singapore

Develops multilingual models and evaluation resources for Southeast Asia.

Regional language coverage; the program is based in Singapore.

Sources: S24

CENIA / LatamGPT

Public / academic research | Base: Santiago, Chile

AI research centre coordinating a Latin American language-model initiative.

Regional collaboration; Chilean coordination is not the location of every contributor.

Sources: S26 · S56

Technology Innovation Institute

Public / academic research | Base: Abu Dhabi, United Arab Emirates

Applied research institute associated with the Falcon model family.

UAE research base; availability and licences depend on the model release.

Sources: S25

Lelapa AI

Company | Base: South Africa / country-level marker, South Africa

Builds multilingual speech and translation tools, including Vulavula.

Focus on African-language and code-switching use cases; no city-level HQ claim here.

Sources: S27

Organization directory

Hugging Face

Company | Base: New York base / international team, United States

Hosts models, datasets and developer collaboration tools.

International platform and community; hosted repositories have their own licences.

Sources: S28

DeepL

Company | Registered office: Cologne, Germany

Provides translation, writing and language-service interfaces.

Cologne registered office; users and product availability span markets.

Sources: S30

PyTorch Foundation

Nonprofit / community | Base: US foundation / global contributors, United States

Supports the PyTorch machine-learning software ecosystem.

Under the Linux Foundation; development is distributed internationally.

Sources: S29

Mila

Public / academic research | Base: Montréal, Canada

Nonprofit AI research institute bringing together university researchers.

Montréal research base; international collaborations.

Sources: S31

Organization directory

RIKEN R-CCS

Public / academic research | Base: Kobe, Japan

Research centre for computational science and supercomputing.

Kobe centre; public scientific computing serves multiple fields, including AI research.

Sources: S32

LNCC / Santos Dumont

Public / academic research | Base: Petrópolis, Brazil

National scientific computing laboratory hosting Santos Dumont.

Brazilian research computing infrastructure; not exclusively an AI facility.

Sources: S33

Data Science Nigeria

Nonprofit / community | Base: Lagos, Nigeria

Builds AI skills, research and social-impact applications.

Lagos research centre and broader training activity; international collaborations.

Sources: S34

CSIRO

Public / academic research | Base: Australia / country-level marker, Australia

Australia's national science agency conducts AI research and applied work.

Multiple Australian sites; marker represents the agency rather than a particular lab.

Sources: S35

Organization directory

UNESCO

Government / intergovernmental | Base: Paris secretariat, France

Publishes a global recommendation on AI ethics.

International membership; an ethical recommendation is distinct from domestic enforcement.

Sources: [S36](#)

European Commission / AI Office

Government / intergovernmental | Base: Brussels, Belgium

EU institutions implement and coordinate the AI Act framework.

EU jurisdiction can reach certain actors outside the EU; legal obligations depend on the case.

Sources: [S38](#)

OECD.AI

Government / intergovernmental | Base: Paris secretariat, France

Provides AI policy analysis, principles and incident resources.

Intergovernmental work; member coverage is not universal global representation.

Sources: [S37](#)

NIST

Government / intergovernmental | Base: Gaithersburg, United States

Publishes the voluntary AI Risk Management Framework.

US standards institute; voluntary use is distinct from a binding legal requirement.

Sources: [S39](#)

Organization directory

AlgorithmWatch

Nonprofit / community | Base: Berlin, Germany

Investigates automated systems and their effects on society.

European civil-society work; it is not a regulator.

Sources: [S40](#)

Turkcell

Company | Base: Istanbul, Türkiye

Operates domestic data-centre/cloud infrastructure and has a planned Google Cloud region partnership.

Existing infrastructure differs from the planned Google region, expected around 2028-2029 in the 2025 filing.

Sources: [S42](#)

TÜBİTAK ULAKBİM / TRUBA

Public / academic research | Base: Ankara / research infrastructure, Türkiye

Provides national research computing, including ARF and the ARF-ACC GPU cluster.

Published ARF-ACC queue documentation lists NVIDIA H100/H200 hardware.

Sources: [S41](#) · [S61](#) · [S62](#)

T3 Foundation / T3 AI

Nonprofit / community | HQ: Istanbul, Türkiye

Turkish-language model and community initiative led by T3 Foundation.

The foundation describes an open-source project; inspect release artefacts before treating that as a licence classification.

Sources: [S43](#)

Organization directory

HAVELSAN / MAIN

Company | Base: Ankara, Türkiye

Provides the MAIN enterprise AI platform, including deployment on closed networks.

Company markets domestic AI capabilities; the claim does not establish a wholly domestic supply chain.

Sources: S44 · S57

Boğaziçi University / BOUN Treebank

Public / academic research | Base: Istanbul, Türkiye

University research includes manually annotated Turkish-language resources.

BOUN Treebank is a documented research resource; the cited paper is historical, not a 2026 release claim.

Sources: S46 · S59

SESTEK

Company | Base: Istanbul, Türkiye

Develops conversational automation and speech technology.

Turkish operating base; part of Unifonic, illustrating ownership beyond the local ecosystem.

Sources: S45 · S58

Türkiye AI Initiative (TRAI)

Nonprofit / community | Base: Istanbul ecosystem platform, Türkiye

Connects businesses, provides training and maintains an AI startup map.

A commercial ecosystem platform, not an independent regulator; its directory is a discovery tool.

Sources: S47

Organization directory

KVKK

Government / intergovernmental | Base: Ankara, Türkiye

Türkiye's personal-data protection authority publishes guidance on generative AI.

Personal-data oversight; guidance must be distinguished from statutory obligations and decisions.

Sources: S48

Statkraft

Company | Base: Norway / country-level marker, Norway

Offers renewable electricity and site solutions for data centres.

Norwegian site offerings and power-market activities; no named customer dependency is inferred.

Sources: S50

Ministry of Industry and Technology

Government / intergovernmental | Base: Ankara, Türkiye

Coordinates industrial technology policy and AI-related investment initiatives.

September 2026 ministry reporting refers to a 2026-2030 AI action plan; announcement is not an implementation audit.

Sources: S49

Glencore

Company | HQ: Baar, Switzerland

Produces and markets metals including copper and cobalt.

Global mining and commodity activities; inclusion illustrates material foundations, not supply to a named AI vendor.

S17 · Masakhane - mission and community

Grassroots research community for African-language NLP. Location/operations: Distributed African community; Distributed participants; no single headquarters is assigned.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S14 · Appen - about, headquarters and offices

Provides human-supported AI data collection, annotation and evaluation. Location/operations: Sydney; Corporate HQ Sydney; US HQ Kirkland; offices include Philippines, India and Vietnam.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S16 · Common Crawl - overview

Makes web crawl datasets available for research and other uses. Location/operations: US nonprofit / web-wide corpus; The corpus is global; a US organizational base does not describe the origins of all data.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S18 · OpenAI - about and product links

Develops AI models, APIs and ChatGPT. Location/operations: San Francisco; Products and research reach many markets; a base marker does not locate every inference request.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

Source register

S19 · Anthropic - company

Develops Claude models, products and safety research. Location/operations: San Francisco; Cloud partnerships include AWS; the atlas documents one selected training relationship.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S21 · Mistral - about

Develops AI models and services, including Le Chat. Location/operations: Paris; Model access and licence terms vary by release; check the specific model card.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S23 · Sarvam - about

Develops text, speech and language AI for Indian languages. Location/operations: Bengaluru; Bengaluru address; multilingual models and APIs serve Indian-language use cases.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S20 · Google DeepMind - about

AI research organization developing models and scientific applications. Location/operations: London research base; Part of Google; research teams and deployment infrastructure span countries.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S22 · DeepSeek - privacy and service operator

Develops language models, chat and API services. Location/operations: Hangzhou; Service operator is Hangzhou DeepSeek; downloaded weights and hosted services have different data flows.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S24 · SEA-LION - models and regional evaluation

Develops multilingual models and evaluation resources for Southeast Asia. Location/operations: Singapore; Regional language coverage; the program is based in Singapore.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

Source register

S25 · TII - research institute

Applied research institute associated with the Falcon model family. Location/operations: Abu Dhabi; UAE research base; availability and licences depend on the model release.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S27 · Lelapa - products and research links

Builds multilingual speech and translation tools, including Vulavula. Location/operations: South Africa / country-level marker; Focus on African-language and code-switching use cases; no city-level HQ claim here.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S29 · PyTorch Foundation - mission

Supports the PyTorch machine-learning software ecosystem. Location/operations: US foundation / global contributors; Under the Linux Foundation; development is distributed internationally.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S26 · LatamGPT - regional initiative

AI research centre coordinating a Latin American language-model initiative. Location/operations: Santiago; Regional collaboration; Chilean coordination is not the location of every contributor.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S28 · Hugging Face - model and dataset hub

Hosts models, datasets and developer collaboration tools. Location/operations: New York base / international team; International platform and community; hosted repositories have their own licences.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S30 · DeepL - publisher and product links

Provides translation, writing and language-service interfaces. Location/operations: Cologne; Cologne registered office; users and product availability span markets.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

Source register

S31 · Mila - about

Nonprofit AI research institute bringing together university researchers. Location/operations: Montréal; Montréal research base; international collaborations.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S33 · LNCC - Santos Dumont

National scientific computing laboratory hosting Santos Dumont. Location/operations: Petrópolis; Brazilian research computing infrastructure; not exclusively an AI facility.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S35 · CSIRO - artificial intelligence

Australia's national science agency conducts AI research and applied work. Location/operations: Australia / country-level marker; Multiple Australian sites; marker represents the agency rather than a particular lab.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S32 · RIKEN - computational science and contact

Research centre for computational science and supercomputing. Location/operations: Kobe; Kobe centre; public scientific computing serves multiple fields, including AI research.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S34 · Data Science Nigeria - about

Builds AI skills, research and social-impact applications. Location/operations: Lagos; Lagos research centre and broader training activity; international collaborations.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S36 · UNESCO - recommendation on AI ethics

Publishes a global recommendation on AI ethics. Location/operations: Paris secretariat; International membership; an ethical recommendation is distinct from domestic enforcement.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

Source register

S37 · OECD.AI - policies and analysis

Provides AI policy analysis, principles and incident resources. Location/operations: Paris secretariat; Intergovernmental work; member coverage is not universal global representation.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S39 · NIST - AI Risk Management Framework

Publishes the voluntary AI Risk Management Framework. Location/operations: Gaithersburg; US standards institute; voluntary use is distinct from a binding legal requirement.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S41 · TRUBA - ARF-ACC queue specifications

Provides national research computing, including ARF and the ARF-ACC GPU cluster. Location/operations: Ankara / research infrastructure; Published ARF-ACC queue documentation lists NVIDIA H100/H200 hardware.

Live page; publication date not stated | checked 2026-10-08
Official indexed excerpt checked; direct fetch returned 502

S38 · European Commission - AI Act framework

EU institutions implement and coordinate the AI Act framework. Location/operations: Brussels; EU jurisdiction can reach certain actors outside the EU; legal obligations depend on the case.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S40 · AlgorithmWatch - investigations

Investigates automated systems and their effects on society. Location/operations: Berlin; European civil-society work; it is not a regulator.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S42 · Turkcell - 2025 Form 20-F

Operates domestic data-centre/cloud infrastructure and has a planned Google Cloud region partnership. Location/operations: Istanbul; Existing infrastructure differs from the planned Google region, expected around 2028-2029 in the 2025 filing.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

Source register

S43 · T3 Foundation - T3 AI

Turkish-language model and community initiative led by T3 Foundation. Location/operations: Istanbul; The foundation describes an open-source project; inspect release artefacts before treating that as a licence classification.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S45 · SESTEK - about and ownership

Develops conversational automation and speech technology. Location/operations: Istanbul; Turkish operating base; part of Unifonic, illustrating ownership beyond the local ecosystem.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S47 · TRAI - ecosystem and startup map

Connects businesses, provides training and maintains an AI startup map. Location/operations: Istanbul ecosystem platform; A commercial ecosystem platform, not an independent regulator; its directory is a discovery tool.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S44 · HAVELSAN - MAIN platform

Provides the MAIN enterprise AI platform, including deployment on closed networks. Location/operations: Ankara; Company markets domestic AI capabilities; the claim does not establish a wholly domestic supply chain.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S46 · BOUN Treebank paper

University research includes manually annotated Turkish-language resources. Location/operations: Istanbul; BOUN Treebank is a documented research resource; the cited paper is historical, not a 2026 release claim.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S48 · KVKK - generative AI guide, 15 questions

Türkiye's personal-data protection authority publishes guidance on generative AI. Location/operations: Ankara; Personal-data oversight; guidance must be distinguished from statutory obligations and decisions.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

Source register

S49 · Ministry - September 2026 GITEX remarks

Coordinates industrial technology policy and AI-related investment initiatives. Location/operations: Ankara; September 2026 ministry reporting refers to a 2026-2030 AI action plan; announcement is not an implementation audit.

Live page; publication date not stated | checked 2026-10-08
Official indexed excerpt checked; direct page request rejected

S51 · Glencore - metals and minerals

Produces and markets metals including copper and cobalt. Location/operations: Baar; Global mining and commodity activities; inclusion illustrates material foundations, not supply to a named AI vendor.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S53 · OVHcloud - legal headquarters

Roubaix headquarters address.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S50 · Statkraft - data-centre solutions

Offers renewable electricity and site solutions for data centres. Location/operations: Norway / country-level marker; Norwegian site offerings and power-market activities; no named customer dependency is inferred.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S52 · NVIDIA - CUDA platform

CUDA is NVIDIA's parallel computing platform.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S54 · Sarvam - models

Text, speech and translation product families.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

Source register

S55 · Sama - human data teams

Data annotation teams in Kenya and Uganda.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S57 · HAVELSAN - contact

Ankara contact address.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S59 · Boğaziçi - computer engineering

University lab list and Istanbul address.

Live page; publication date not stated | checked 2026-10-08
Official indexed excerpt checked

S56 · CENIA - research centre

Chilean research centre and regional work.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S58 · SESTEK - demo contact

Istanbul operating address.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

S60 · DeepSeek - services and model downloads

Chat, API and model-release links.

Live page; publication date not stated | checked 2026-10-08
Opened or official search excerpt checked

Source register

S61 · TÜBİTAK - research computing at MODSIMMER

ARF/TRUBA research infrastructure in Ankara; EuroHPC participation.

2024 report; historical context | checked 2026-10-08

Opened or official search excerpt checked

S62 · TÜBİTAK - 2025 annual report

2025 TRUBA computing activity; historical rankings are not presented as current.

2026-03 | checked 2026-10-08

Official indexed excerpt checked

S63 · NVIDIA - Blackwell at TSMC Arizona

Blackwell wafer and volume-production milestone at TSMC Arizona.

2025-10-17 | checked 2026-10-08

Opened or official search excerpt checked

S64 · Anthropic - Amazon compute collaboration

Primary training/cloud relationship; includes future capacity commitments.

2026 announcement; live page checked | checked 2026-10-08

Opened or official search excerpt checked

S65 · TRUBA - ARF-ACC hardware queues

Queue configuration identifies NVIDIA GPU hardware.

Live page; publication date not stated | checked 2026-10-08

Official indexed excerpt checked; direct fetch returned 502

S66 · Google Cloud - planned Türkiye region

Planned region and Turkcell partnership.

2025 announcement | checked 2026-10-08

Opened or official search excerpt checked

Use, revisit, investigate

A useful AI story can begin at any layer.

Follow the claim down through the stack. Follow the resources and people across the map. Return to the people affected by the system.
